List Self-Limiting Facility

Self-Limiting Facility

Required for REG Change My Application Type

Phases the field is required

Please Note

In the event data entries into RIOO on the SLF panel are changed, a downloadable file is created and the TDSP shall be notified of the availability of the downloadable file.

Is your resource part of a Self-Limiting Facility?

☒ Yes ☐ No

MW Injection Limit of the Self-Limiting Facility

120 MW

MW Withdrawal Limit of the Self-Limiting Facility

110 MW

The Interconnecting Entity or Resource Entity acknowledges and agrees that: 1) the project will not be permitted to complete Resource commissioning as a Resource within a Self-Limiting Facility until ERCOT Protocols Section 3.8.7, Self-Limiting Facility, becomes effective; and 2) once the project is permitted to complete Resource commissioning as a Resource within a Self-Limiting-Facility, it will be subject to the MW injection limit and/or MW withdrawal limit stated above.

Name

I Me Mine

Date

11-23-2023 X

Figure 2 The SLF entries were moved from the Unit Details section to this section since SLF applies to the entire facility. Different Injection and Withdrawal limits are now available for entry. This panel needs an attestation from one of the contacts on the project with a date for the attestation. An email should be sent to the TSP for this project and to ERCOT if the Yes/No or Injection/Withdrawal limits are changed.

List POIB DATA

POIB Data

Application Type: REG

Check Application Progress

Here's what we have so far. You can Edit or Delete what you have already entered

POIB Owner	POIB Substation	POIB Number		
SOUTH PLAINS ELECTRIC CO OP INC (TDSP)		1318	Edit	Delete
SOUTH PLAINS ELECTRIC CO OP INC (TDSP)		1319	Edit	Delete

+ Add POIB DATA Information

1 Required

Done

If you have no other POIB DATA information to add, select Done.

Figure 3 POIB data was moved from the Unit Details panel into the POIB panel under substation. The purpose was for the RE to be able to enter more than one POIB if necessary. An example of when this may be necessary is when there are two or more units in the RE substation that are not connected and each unit has a unique POIB. The RE would then enter each POIB as shown above by clicking the "+ Add POIB DATA Information" link. Most projects will have only one POIB.

You are using an unsupported command-line flag: --disable-web-security. Stability and security will suffer.

The screenshot shows the ERCOT Interconnection Services web application. On the left is a sidebar with the ERCOT logo, user information (TESTBIGF, 25INR0543), and a navigation menu. The main content area is titled 'Interconnection Services' and 'List POIB DATA'. Below this is a 'POIB Data' section with a toggle for 'Required for REG' and a 'Change My Application Type' link. A 'Phases the field is required' toggle is also present. The form contains the following fields: 'Substation Long Name' (TESTBIGF), 'POIB Owner' (SOUTH PLAINS ELECTRIC CO OP INC (TDSP)), 'POIB Substation' (Search substation), '(OR)', 'POIB Substation Code' (BFPOIB1), 'Voltage' (345), and 'POIB Number' (1318).

Figure 4 The data required for the POIB section has been expanded to include the substation code and POIB owner. If the POIB substation is an existing substation, then start typing the POIB Substation code in the upper box labeled “POIB Substation” and the station code will autofill if found. If the POIB Substation is a new station, then enter the new station code in the lower box labeled “POIB Substation Code”. Note that this is 8 character substation code and not the substation name.

This screenshot shows the same ERCOT Interconnection Services web application as Figure 4, but for a second POIB. The form fields are: 'Substation Long Name' (TESTBIGF), 'POIB Owner' (SOUTH PLAINS ELECTRIC CO OP INC (TDSP)), 'POIB Substation' (Search substation), '(OR)', 'POIB Substation Code' (BFPOIB2), 'Voltage' (345), and 'POIB Number' (1319). Red arrows point to the 'POIB Substation Code' and 'POIB Number' fields, highlighting that they are different from the first POIB.

Figure 5 Same as the above figure but for the second POIB. Notice that the POIB Substation Code (BFPOIB2) and POIB Number (1319) are different from the figure above.
